COMMENT * These sequences are draft human sequences, not finished sequences. * These sequences are unordered pieces. And gaps between the contigs * of the same clone are represented as 100 N. * NOTE: This is a 'working draft' sequence. It currently * consists of 15 contigs. The true order of the pieces * is not known and their order in this sequence record is * arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.
